PROFESSIONAL SUMMARY

Computer Engineering graduate with proven experience shipping full-stack web applications, AI-driven systems used by real users and internal operations teams. Comfortable across the entire development lifecycle from architecting databases and REST APIs to deploying cloud-hosted, production-grade software. Strong hardware foundation through VLSI, embedded systems, and digital design coursework.

TECHNICAL SKILLS

Languages: C, Python, Java, JavaScript (ES6+), TypeScript, HTML5, CSS3, MATLAB, Verilog/VHDL

Frameworks & Libraries: React, Next.js, Node.js, Express.js, Flask, TensorFlow, Tailwind CSS, Bootstrap

Databases & Cloud: MongoDB, Firebase (Firestore, Hosting, Auth), SQL, REST APIs, Stripe API

Tools & Platforms: Git, GitHub, Docker, VS Code, Postman, Excel (VBA/Power Query), Linux/Bash

Hardware & Embedded: VLSI Design, Digital Logic, Embedded C, Microcontroller Programming, FPGA

EDUCATION

University of Guelph — Bachelor of Engineering, Computer Engineering

Sept 2021 – Dec 2025

Relevant Coursework: Data Structures & Algorithms, Software System Development & Integration, Engineering Design, VLSI Digital Design, Advanced Computer Architecture, System Analysis & Design, Discrete Structures I & II.

EXPERIENCE

AJ Concord General Services Inc.

Toronto, ON

Technical Operations & Software Coordinator

Sep 2024 – Present

- Designed and deployed internal tooling using Python and advanced Excel automation (VBA, Power Query) to provide real-time tracking of project costs, crew schedules, and resource allocation reducing administrative overhead by 25% and improving budget adherence across all active projects.
- Built and maintained the company website from the ground up, implementing on-page SEO strategies including structured metadata, keyword targeting, and performance optimization that drove a measurable and sustained increase in qualified inbound leads.
- Engineered automated invoice generation and client record management workflows with multi-layer data validation, eliminating recurring billing errors and recovering several hours of manual work per week for the operations team.
- Architected real-time project tracking dashboards that gave management live visibility into crew deployment, material deliveries, and milestone progress across multiple concurrent construction and landscaping projects simultaneously.

RadicalX

Mississauga, ON

Software Developer & AI Intern

April 2023 – Aug 2024

- Built and shipped production features on the RadicalX platform using React, Node.js, and Firebase including the Missions module, subscription management flows, and payout systems serving an active and growing user base.
- Led design and implementation of automated transactional email systems, engineering responsive templates with dynamic content that achieved an 80% internal approval rate and improved user engagement across the platform.
- Operated in a fast-paced Agile environment, contributing to sprint planning, peer code reviews, and cross-functional feature scoping consistently delivering reliable, maintainable increments on tight timelines.

ENGINEERING PROJECTS

Full-Stack E-Commerce Platform | React, Node.js, MongoDB, Stripe API, Firebase

Jan 2025 – Dec 2025

- Architected and deployed a production-ready online store with end-to-end Stripe payment processing, real-time inventory management, and Firebase Hosting supporting the full customer purchase lifecycle from browsing to order confirmation.
- Engineered MongoDB query optimizations and API response pipeline improvements that reduced average API latency by 40%, significantly improving page performance and perceived load time under concurrent user traffic.
- Designed and implemented a role-based access control (RBAC) system with distinct permission scopes for admins, vendors, and customers hardening platform security and enabling scalable, maintainable access management.

AI-Powered Customer Support Chatbot | React, Node.js, OpenAI API, Firebase

Mar 2023 – Aug 2023

- Designed and built a production AI chatbot for an e-commerce storefront integrating the OpenAI API for real-time natural language understanding, enabling automated handling of customer inquiries, order tracking, and product questions at scale.
- Achieved a 60% reduction in query resolution time versus a static FAQ by implementing context-aware conversation handling that maintains session continuity deployed on Firebase Hosting with secure API key authentication and environment-based configuration.
